PRESS RELEASE

SecGrid launches operations to address the challenges of cybersecurity, digital transformation, and resilience for modern Enterprises.

SecGrid today announces the commencement of its operations, aiming to support organizations operating in complex, highly digitalized, and regulated environments.

SecGrid was founded by **Dionysis Grigoratos**, a senior executive with over 30 years of experience across the Telecommunications, Technology, and Financial Services sectors, and **Pronet S.A.**, a well-established provider of enterprise IT solutions, cybersecurity, and managed services.

Building on the shareholders' extensive experience in managing critical infrastructures and large-scale transformation programs, SecGrid is established to address the growing demand for comprehensive, **secure-by-design cybersecurity approaches** that go beyond fragmented, point solutions.

The company specializes in **Broadcom Enterprise Software & Cybersecurity solutions**. It supports organizations in measuring, governing, and optimizing the business value of technology, as well as in end-to-end application and network performance monitoring. In parallel, it delivers comprehensive cybersecurity services, including security architecture, network and infrastructure protection, cloud and endpoint security, and managed security services.

"Cybersecurity has evolved into a core business and strategic priority," said **Dionysis Grigoratos, Co-Founder & CEO of SecGrid**. "Our goal is to help organizations strengthen trust and operational stability in an increasingly interconnected digital environment."

Through its collaboration with **Pronet S.A.**, SecGrid secures a strong position in a rapidly growing market, leveraging an already established competitive advantage in the delivery of IT solutions. With deep expertise and advanced implementation capabilities, the company is well positioned to serve both mid-sized and large enterprises across multiple industry sectors.
