May 1, 2026

PRESS RELEASE

Following its launch announcement in January 2026, SecGrid dynamically expands its AI-Driven Cybersecurity portfolio through a Strategic Partnership with Twine Security.

This partnership represents a natural evolution of SecGrid's consistent positioning in the Enterprise Software & Cybersecurity market and reinforces its role as a trusted partner for enterprises investing in innovative, AI-enabled security solutions.

Through its strategic partnership with Twine Security, SecGrid introduces Twine Security's **Digital Employee** to the Greek and regional market, enabling organizations to leverage advanced automation and AI-driven security operations that augment human teams, streamline workflows, and enhance resilience against modern cyber threats.

Twine Security's **Digital Employee** solution is designed to act as an intelligent, autonomous extension of enterprise teams—capable of executing repetitive and complex cybersecurity and IT tasks with speed, consistency, and precision. By integrating seamlessly into existing enterprise environments, the solution helps organizations improve operational efficiency, reduce response times, and address the ongoing cybersecurity talent shortage.

SecGrid will provide end-to-end services, including solution design, implementation, localization, training, and ongoing technical support, ensuring that customers maximize the value of the Digital Employee platform.

Commenting on the partnership, Dionysis Grigoratos, SecGrid's Co-Founder & CEO stated: *"We are excited to partner with Twine Security to bring their groundbreaking Digital Employee solution to the Greek and regional markets. Organizations today are under immense pressure to do more with less while facing increasingly sophisticated cyber threats. This partnership allows us to offer our clients a powerful new way to scale their operations, improve efficiency, and strengthen their security posture through intelligent automation."*

"SecGrid's expertise in cybersecurity make them an ideal partner for Twine Security," said the CEO of Twine Security. *"Together, we are enabling enterprises to rethink how work gets done by introducing Digital Employees that can operate alongside human teams. We believe this partnership will accelerate adoption of autonomous security operations and deliver measurable value to organizations across Greece and beyond."*
